PADIS EDIFACT AND XML CODESET

Version 13.2

18 November 2013

Summary

This document provides the agreed codesets utilized by the Airline industry for the identification of information included within the PADIS data segments.

The codeset directory is designed to be used by both the EDIFACT Messages as well as the XML messages now being delivered.

The management of the Codeset is performed by IATA and the Technical Assessment Group once the requests for new codesets have been approved by the relevant PADIS working group.

Identification and assignment of additional codesets is via the Technical Assessment Group. Updated codesets are reported to the PADIS Board for information only.

New Codeset requirements for inclusion in this Codeset should be submitted to relevant PADIS working groups. These are RES WG or APTS WG for code requirements related to EDIFACT messages and XML WG for code requirements related to XML messages. Alternatively, should there be urgent requirements for new codesets, these can be submitted to IATA at padis.secretariat@iata.org

PADIS CODE SET DIRECTORY

Legend for Code Set Directory

- + Signifies new code set or code value.
- * Signifies change of a code set or to a code value.
- ! Signifies change of a description for a code value or note.
- # Code value marked for subsequent deletion
(Note: The code marked for deletion will become inactive at the time it has been marked but remain in the current position for one year.
If this code has been moved from one code set to another, then a reference to the new code set will be given as a note.)

Note 1: An explanatory note can be added to any updated entry.
